XLReporter Version 14.1 is Available

February 17, 2021 – SyTech, Inc. (The Report Company), the market leader in automated reports and dashboards for industry, today announced the release of XLReporter version 14.1. This version expands the data connectivity of XLReporter to Rockwell Automation FactoryTalk Services, HMS Ewon M2Web and ProSoft PLX51. Enhancements have also been made to the ISA 18.2/IEC 62686 Alarm Management module and the Template Studio.

The new Data Agent connector gives FactoryTalk View SE users secure and easy access to live data, history data in the File Sets (DAT) as well as FactoryTalk SE Historian. This connector, along with the existing connectors to FactoryTalk Linx Gateway, FactoryTalk View SE Data Logs (ODBC), PanelView7 data files and the FactoryTalk Alarms and Events provides users a complete set of interfaces to process data available from Rockwell Automation.

The new HMS Ewon M2Web connector provides access to live data from remote devices connected to the Ewon. This connector compliments the existing connector to HMS Talk2M connector which provides the historical data captured by Flexy devices.

The new ProSoft PLX51 connector provides access to the history data in PLX51 devices. The devices can be installed on-premise or remote locations, in the case of the latter, the ProSoft Connect is used. The history data is consolidated in a database for reports and dashboards.

XLReporter is built on the Microsoft Open Office standard and provides the same "look and feel" of Microsoft Excel, a familiar environment of cell formulas, statistics, formatting, sorting, filtering, images and charts. It also provides features like analytics tailored to specific industries, automated reports, distribution e.g., email and on-demand reports from web browsers.

"Microsoft Excel is indisputably one of the most widely used applications. XLReporter propels users to 'Go Beyond Excel' and take the best of worksheet functionality and deliver it to a web browser," explained Peter Kaprielian, CTO of SyTech. "This release provides more connectivity to our partners' devices and software which is the first step in analyzing data".

In industries that require ISA18.2 Alarm Management, XLReporter provides timely measurements of the key performance indicators as described in the Monitoring and Assessment stage of the alarm life cycle. This release takes the KPIs to a new level with custom filters on position, module and attribute. The KPIs can also be exported to an external database for long-term tracking of improvements.

About SyTech:
SyTech develops reporting software to enable organizations to turn raw process data into actionable information, increasing efficiency and reducing costs. With a combined knowledge of business technology and automated systems, SyTech created XLReporter. The product is built on the Microsoft Open Office standard and is the leading reporting platform in industry to deliver workbook technology to an automated environment.

A private company founded in 1994 and headquartered in Massachusetts, SyTech provides solutions around the world and in virtually every industry, from small municipal facilities to major international manufacturers and Fortune 500 companies.
